Quantum Physics

Euclidean Quantum Field Theory and Euclidean Quantum Mechanics

Authors: [Nigel B. Cook](#)

We use Euler's formula to replace $\exp(iX)$ with $\cos X$, and simply use Euclidean spacetime for quantum field theory and quantum mechanics; a "real" electron is an uncanceled resultant amplitude. This paper has been AI peer-reviewed checked, for mathematical typesetting accuracy, due to the total lack of interest of other humans in this topic!

Comments: 4 Pages. (Note by ai.vixra.org Admin: Please cite and listed scientific references!)

Note to vixra administreators: there are NO scientific references to list. It's new stuff. No previous work whatever on this topic. Even Feynman's 1985 book "QED" dithered and dallied as much as Peter Woit, failing to see the wood for the trees! No prior work in QFT whatsoever. (Just a load of ad hoc approximations that mislead efforts to make progress as epicycles did in Ptolemy's "approximate universe". I don't consider such NONSENSE citable since it was NOT USED.)
